

Rivière des Outaouais au lac Deschênes – Niveau en m (2016 to 2019)

Ottawa River at Britannia/Lake Deschenes – Water level in m (2016 to 2019)

Water levels and flows during the fall vary according to weather conditions that affect upriver conditions.

Fall with dry conditions (e.g. fall 2016) can be followed by very wet spring conditions (e.g. spring 2017).

The severity of a spring flood is not linked to the conditions over the preceding fall.
